OPHTHALMIC
PLASTIC
&
RECONSTRUCTIVE
SURGERY

Dr. Gary Lelli and the Oculoplastic team.

OUR TEAM

The Ophthalmic Plastic and Reconstructive Surgery (Oculoplastic) Service at Weill Cornell Eye Associates provides evaluation and treatment of pediatric and adult diseases that affect the eyelids, tear ducts and orbit.

An oculoplastic surgeon is an ophthalmologist with specialized training who performs cosmetic and reconstructive procedures on the eyelids, orbit (bones and anatomic structures behind the eyeball) and lacrimal (tear drain) system. The field of oculoplastic surgery combines the precision and microsurgery of ophthalmology with the aesthetic and reconstructive concepts of plastic surgery.

Oculoplastic surgery is a small, highly selective subspecialty of ophthalmology.

The Oculoplastic Surgery Service at Weill Cornell Eye Associates is led by Dr. Gary Lelli, who is a fellow of the American Board of Ophthalmology (board-certified) and an active member of the American Society of Ophthalmic Plastic and Reconstructive Surgery (ASOPRS). Dr. Lelli often works in conjunction with physicians of other specialties, such as dermatology, endocrinology, neurosurgery, radiology, plastic surgery and otorhinolaryngology in order to provide customized and sub-specialized care.

OUR EXPERTISE

► Eyelid disorders:

- ptosis (drooping eyelids)
- congenital malformations
- trauma (lacerations)
- eyelid lesions and tumors (skin cancer)
- entropion (turned in eyelid) & ectropion (turned out eyelid)
- stytes (chalazia)
- blepharospasm
- eyelash abnormalities

► Orbital processes:

- thyroid (Graves) eye disease
- orbital inflammatory syndromes
- tumors
- fractures
- enucleation (eye removal) & care of the anophthalmic socket (eye socket)

► Lacrimal problems:

- nasolacrimal duct obstruction (blocked tear duct)
- punctal malposition or stenosis (abnormal tear drain)
- lacrimal system trauma
- tumors
- unexplained tearing

AESTHETIC SERVICES

Many of our patients seek advice to improve the appearance around their eyes. The Oculoplastic Service specializes in these cosmetic concerns and offers numerous non-invasive, minimally invasive and surgical treatments for periocular rejuvenation. As with all patients, the utmost care is taken to provide a professional and confidential evaluation with an individual treatment plan geared towards achievement of a natural aesthetic result.

► Typical reasons for cosmetic consultations include:

- drooping, or tired, upper eyelids
- excess eyelid skin
- eyelid bags
- wrinkles
- post-cosmetic eyelid surgery complications
- Botox, Latisse, Restylane & other fillers

Dr. Lelli and the Oculoplastic Surgery Service look forward to welcoming you to our state-of-the-art Ophthalmology Department at NewYork-Presbyterian Hospital/Weill Cornell Medical Center.
